Quarterly Hardware Performance Benchmarks

Below are the benchmark metrics recorded across four computing clusters during the fiscal testing cycle.

Server Node	CPU Cores	Memory (GB)	Throughput (req/s)	Latency (ms)
Node Alpha	32	128	4850	12.4
Node Beta	64	256	9200	8.1
Node Gamma	16	64	2400	22.7
Node Delta	128	512	18500	4.3

Cluster Utilization Summary

All nodes operated within the nominal thermal dissipation threshold. Secondary storage replication remained synchronized throughout the duration of the benchmark.
