Data Center Infrastructure Performance

Below is the infrastructure utilization summary recorded across compute clusters.

Cluster Node	Cores Allocated	Memory Pool	Network IO	Operating Status
Alpha Primary	64 Cores	256 GB	12.8 Gbps	Online Active
Beta Secondary	32 Cores		8.4 Gbps	Standby Mode
Gamma Worker	128 Cores	512 GB	24.1 Gbps	Online Active

Cluster health checks verified zero thermal throttling incidents during testing.
